SCHOLASTIC DEVELOPMENT PROGRAM

The learning and competencies acquired by students at the high school level largely determine their progression to higher levels of education, especially where admission to institutions of higher education is granted on the basis of merit in competitive examinations. Since such competitive examinations typically test the students' comprehension and analytical skills, it is essential that such skills are developed in a concerted manner at the school level.

With a view to supplement teaching in the school and to promote scholastic development of students, the School has introduced a **Scholastic Development Program** for students of **Std. VIII** and **Std. IX**, commencing from June 2019.

The features of the Scholastic Development Program include

- Conceptual understanding of Science, Mathematics and Mental Ability
- Proven methods and best techniques to tackle competitive exam questions
- Focus on problem solving
- Practice of competitive tests for Olympiads, MCT, GTSE, NTSE and other national and state level examinations

The program is designed to eventually lay strong foundations in preparing students for highly competitive examinations such as IIT JEE, NEET, BITSAT, etc.
